MOTION REQUIREMENTS

PROMPT 2: HERO ANIMATION

Visual Description

Create a hero section background animation featuring a vertical flowing stream of liquid metal or cinematic white light that feels alive, fluid, and powerful. The animation should simulate a sleek, monochromatic beam of light running from the top to the bottom of the hero section, surrounded by microscopic floating ash particles and soft greyscale gradients.

The center of the stream should be bright and intensely white, with subtle, turbulent energy waves drifting around it like a silk cloth caught in a slow-motion wind. Add depth and motion using subtle particle turbulence, maintaining a smooth upward or downward ambient drift.

The pure white glow should cast a soft, gradient reflection on nearby text areas, blending naturally into the pitch-black page background.

Technical Configuration

Replace any existing placeholder canvas with this bespoke animation. The color integration must rigidly adhere to the black-and-white theme:

Primary Illumination

Core Light: Pure White (#FFFFFF)
Role: Defines the central mass and brightest reflection point of the flow.

Gradient Blend

Fade Shift: Soft Ash (#888888) to Pitch (#000000)
Role: Creates volumetric depth at the edges of the light stream.

Secondary Particles

Accents: Frosted Silver (#CCCCCC)
Role: Drifting elements to establish spatial scale and perspective.

Physics / Easing

Behavior: Fluid, low-gravity
Role: Ensures the animation feels premium, not hyperactive or distracting.
